

## **9.4.8      Basking shark (*Cetorhinus maximus*) in the northeast Atlantic (ICES Areas I–XIV)**

### **Single-stock exploitation boundaries**

The only new information available for basking shark (*Cetorhinus maximus*) is landings data which gives no basis to revise the advice from 2006. The advice for 2009 and 2010 is therefore the same as the advice given in 2006: “*No targeted fishing for basking shark should be permitted and additional measures should be taken to prevent bycatch of basking shark in fisheries targeting other species. A TAC should cover all areas where basking sharks are caught in the northeast Atlantic. This TAC should be set at zero.*”

ICES notes that from 2007 onwards the TAC covers all areas where basking sharks may be caught.
